Response to Amendment

Claim Rejections - 35 USC § 103

1. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO (99/40171).

Response to Arguments

2. Applicant's arguments filed 10-30-2003 have been fully considered but they are not persuasive.

Applicant argues that the bar compositions of WO '171 cannot float because they have an overall density of 1040-1400 g/L and the bars of the present application must float in deionised water at 20 degrees Celsius.

The examiner contends that the bars of WO '171 do have a density as suggested by the applicant, but the density of the bar is not what applicant has claimed. The claims state that the particle of the benefit agent must float in water (see claim 1). The particle as claimed may include a cationic fabric-softening agent with a particular particle size. WO '171 teaches a cationic fabric-softening agent encompassing the claimed particle size. Therefore, one of ordinary skill in the art would expect the cationic fabric softening particles of WO '171 to float in water as claimed by the present application because each of the components are taught as required, absent a showing to the contrary.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
